ACKNOWLEDGEMENTS

First of all, I wish to thank my supervisors, Eric Molleman and Jannes Slomp. They have been very patient, helpful, and supportive over all these years. Eric is very logic in terms of being able to see things through and grasp the main ideas from a lot of information. Jannes is very enthusiastic and creative. Together they make a wonderful team.

I especially appreciate the help from Durk-Jouke van der Zee. He offered me a lot of advices in simulation and in the writing of my thesis. In addition, I would like to thank the many colleagues who supported me in one way or another, especially the ones in the Production System Design group.

I wish to thank the members of the reading committee, Prof. dr. J. Wijngaard, Prof. dr. M. P. de Looze, and Prof. dr. Gursel Suer for their willingness to read my thesis, and for their valuable and constructive comments.

My friends in Groningen have made my stay very pleasant. I will preserve the memories of numerous parties, barbecues, trips, and sports sessions, and all the happy time that we spent together.

Finally, I would like to express my gratitude to my family members. They always respect my choices, and have always been tolerant, understanding, and encouraging.

Hong Yue
Groningen, April 2005
